

## ABSTRACT

A housing member for housing a long material includes a base and a cover. The base includes an opening extending along a longitudinal direction, and a plurality of convex portions arranged at predetermined pitches along a longitudinal direction. The cover covers the opening of the base. Each of the convex portions of the cover extends along a circumferential direction of the cover. The cover includes a plurality of convex portions provided at predetermined intervals along the longitudinal direction of the cover. The arranged pitch of the convex portions of the base and the arranged pitch of the convex portions of the cover are the same. When the cover is assembled to the base, the convex portion of the cover and the convex portion of the base are fitted to each other so as to overlay on each other.
